SEMI-AUTOMATIC PRECISION RIFLE MODEL 2185 MATCH

Standard calibers:

.30-06
.308 Win.
7x64

Other calibers at request!

◇ Average weight 5 kg
◇ Barrel length 510 mm
◇ Overall length 1150 mm

◇ Gas operated self loading precision rifle. Rotary bolt with three locking lugs of extreme strength.

◇ Free floating barrel of special steel for durability and high accuracy.

◇ Push-button operated hold open catch allows to keep the bolt open. This is a substantial factor of safety at the range.

◇ Two stage light trigger.

◇ Standard magazine capacity: 3 + 5 rds.

◇ The rifle will fire only when the bolt is fully locked. Manual safety locks the hammer. Cocking indicator inside the trigger guard.

◇ The rifle can be made to shoot as a manual operated repeater (e.g. at the range).

◇ Metallic sights are standard. Our new quick mount system elements are assembled on the top of the receiver. This system enables quick mounting and dismounting of a telescope without any change of point of impact.

◇ The rifle is designed for extreme functional dependability with accuracy far higher than expected from a self loading rifle.

◇ Match type laminated wood stock in which the action is glass bedded, equipped with a bottom rail to hold a bipod and sling swivel etc. The cheek piece and rubber butt plate are adjustable.
